Projects

Event Manager (VenU2Go)| *Laravel, MySQL, API, Git*

VenU2Go is a platform enabling business owners and individuals to rent out their space, providing an additional source of income alongside your products or services. By adding VenU2Go, businesses can take control of their earnings by including space rentals. This extra income frees up expenses and helps businesses stay operational for longer. The goal of VenU2Go is to help business owners that took their time and money to start their business, keep it up and running longer than average

CyberSecurity Portal | *Laravel, MySQL, Redis, API, Git*

B2B application for companies that could add their sites to this portal and receive complete analytics and statistics of their site on vulnerabilities, attacks, problems on their site in real time. My role is to write fast and effective API methods for the frontend. Also integrate other systems via their APIs.
Technologies: Backend - Laravel, Frontend - React, Database - MySQL, Cache - Redis, Version Control - Git

English learning app | *NodeJS, MongoDB, API, Git*

Application for learning english. You can watch videos there, answer a questions about a lessons, see your progress and much more.
I collaborate closely with the frontend development team to ensure seamless integration and optimal user experience. My responsibilities also involve troubleshooting and optimizing API performance to enhance overall system efficiency.
Technologies: Backend - NodeJS, Frontend - VueJS, Database - MongoDB, Version Control - Git
